Hello F*EX users,

I have deployed a new F*EX server (URL <https://fex.gacrc.uga.edu>) to replace the web.qbcg.uga.edu machine. The new machine is ready and users can start using it. I've synced all accounts and files to the new machine.

To use the new machine from a linux machine you will need to use the latest fexsend client. You can download the new client from <https://fex.gacrc.uga.edu/download/fexsend>

You will need to edit your id file in your home directory as well.

Edit ~/.fex/id file and

replace `http://web.qbcg.uga.edu:8888`

with `https://fex.gacrc.uga.edu`

I will disable uploading on the old web.qbcg.uga.edu machine on Thursday March 12th 5 PM.

The old machine will be up and running for another 15 days so users can download their files.

Please switch to the new machine ASAP.

Thanks,

Raj
